

Auto-code-reviewer-cli

Match Score: 95/100

<https://github.com/Jabtwin/Auto-code-reviewer-cli>

This project showcases exceptional skills in building test automation frameworks and supporting Continuous Delivery through automated code reviews and unit test generation. The use of Husky and GitHub Actions directly aligns with implementing and supporting CI/CD pipelines, crucial for an internationally deployed software product.

Predictive-Vision-MLOps-Pipeline-for-Flexible-Micro-Electronics

Match Score:
80/100

<https://github.com/Jabtwin/Predictive-Vision-MLOps-Pipeline-for-Flexible-Micro-Electronics>

This repository demonstrates robust experience in developing and automating complex MLOps pipelines, directly supporting Continuous Delivery and Deployment principles in a systematic way. The automation of training workflows showcases a strong understanding of building reliable, automated processes essential for software product management.
